

Sammi Fishbein - Backend Software Engineer | Python • Flask • PostgreSQL

1-978-729-7544 | samfishbein1198@gmail.com | Harvard, MA (Can relocate to Los Angeles or Orange County within 2 to 3 weeks)

Summary

Software Engineer focused on backend systems and data-driven platforms, with hands-on experience building cloud-hosted Python services and production REST APIs. Experienced designing relational data models, authentication workflows, and modular architectures supporting real-world operational systems. Strong systems thinker with a builder mindset, leveraging AI-assisted development to rapidly design, debug, and deliver scalable software solutions.

Experience

JACKSON HEWITT TAX SERVICE | Worcester, MA

Software Automation Engineer/Regional Systems Engineer | 09/2022 - Present

- Designed and deployed cloud-hosted Python backend systems supporting multi-district operational workflows in high-volume production environments.
- Built RESTful APIs using Flask integrated with PostgreSQL (Render), enabling secure data access, search, reporting, and structured CRUD operations.
- Implemented secure authentication and authorization mechanisms including password hashing (bcrypt), PIN verification, RBAC, and session validation.
- Architected applications with clear separation between client, API, and database layers to support modular development and long-term scalability.
- Managed secure environment-based configuration and cloud deployment pipelines.
- Improved operational visibility across 18 districts by replacing manual reporting processes with structured, database-backed systems.
- Applied systems-level debugging across application, database, and infrastructure layers during peak seasonal production cycles.
- Collaborated cross-functionally with field operations teams to translate real-world business requirements into scalable technical solutions.

Projects

ASTRA - Cloud-Based Issue Tracking Platform

Independent Fullstack Engineering Project

- Designed and deployed a modular issue tracking platform using Python (Flask) and PostgreSQL with cloud hosting (Render).
- Developed RESTful API endpoints supporting secure multi-user workflows and structured data retrieval.
- Leveraged AI-assisted engineering workflows in collaboration with a ChatGPT instance ("Astra") to accelerate architecture design, debugging, and backend development across multiple systems.
- Modeled normalized relational schemas for issue tracking, authentication metadata, and operational reporting.
- Implemented authentication and RBAC workflows to ensure secure multi-role access.
- Built a desktop client interface (Tkinter) integrating securely with backend APIs.
- Packaged and distributed application builds using PyInstaller.
- Leveraged AI-assisted tools to accelerate feature iteration, review edge cases, and improve development efficiency.

Tech Stack: Python, Flask, PostgreSQL, REST APIs, SQL, bcrypt, Git, Render, Tkinter

T.K.O! Rhythm Game Web Platform

Independent Software Project | 2026 – Present

- Designed and built a full-stack web platform supporting a narrative rhythm game project
- Developed backend REST API using **Python, Flask, and PostgreSQL**
- Implemented secure user authentication and account management workflows
- Built frontend interface using **HTML, CSS, and JavaScript**
- Designed normalized relational database schemas supporting user accounts, authentication metadata, and platform content

systems

- Deployed services using **Render cloud hosting**

Education

Berklee College of Music | Boston

Music Production and Engineering | 09/2025

Skills

Python, SQL, C++, JavaScript, Flask, ChatGPT, RESTful API Design, AI-Assisted Development, Authentication (RBAC), Session Management, PostgreSQL, Schema Design, Normalization, Query Optimization, Git, Postman, VS Code, Pycharm, Object Oriented Design, Modular Architecture, Cloud Deployment, Secure Configuration, Agile Collaboration

Certificates

CompTIA Network+
